What's new in MyID version 11.6

MyID version 11.6 is now generally available to all Customers and Partners, new and updated capabilities include:

NEW FEATURES

Mobile Authentication – MyID now ships with an innovative new authentication service enabling mobile devices to be used as secure access keys to corporate resources.

A new MyID Authenticator app is provisioned with a PKI-based digital identity by MyID and is used to authenticate the user to the MyID authentication service by PIN, Touch ID or Face ID.

The Authentication service connects to in-house access control systems via a plug-in to Active Directory Federation Services, REST APIs are also provided for integration with additional identity management infrastructure components.

MyID mobile authentication supports corporate issued and end user owned (BYOD) scenarios and combines high levels of security with a simple user experience.

Mobile identities can be issued via a self-service derived credential process, or by an operator-led process.

New Operator Client – A new browser independent client is provided for MyID Operators, supporting people operations and request management.

The client has an improved user experience enabling operations to be performed directly from a person landing page, reducing the number of steps required to perform operations.

The client also benefits from improved performance due to the REST API based architecture and modern React based client.

Further operations will be migrated to the new client in future releases of MyID

Windows Hello for Business – MyID now supports issuing of certificates to a Windows Hello for Business (WHfB) protected device.

Capabilities include issuing of new certificates with keys generated on-device (e.g. for signing or authentication) and the recovery of archived encryption keys (e.g. for reading encrypted email)

MyID can issues certificates to WHfB from any supported certificate authority and can also trigger the WHfB enrolment process if the device is not already enrolled

INTEGRATION

The following additional third-party systems and devices are now supported:

- Gemalto ID Prime MD930 and MD3930 smart cards
- Symantec (Digicert) MPKI v8
- Windows 10 version 1909

Please refer to the documentation provided with the MyID v11.6.0 product release (available on the Customer Portal) for further details on the new features and which are applicable to your variant of MyID.
