## Conventions used in this document

- Lists:
  - Numbered lists are used to show the steps involved in completing a task when the order is important.
  - Bulleted lists are used when the order is unimportant or to show alternatives.
- **Bold** is used for menu items and for labels.  
For example:
  - Record a valid email address in '**From**' email address.
  - Select **Save** from the **File** menu.
- *Italic* is used for emphasis:  
For example:
  - Copy the file *before* starting the installation.
  - Do *not* remove the files before you have backed them up.
- ***Bold and italic*** hyperlinks are used to identify the titles of other documents.  
For example: "See the ***Release Notes*** for further information."  
Unless otherwise explicitly stated, all referenced documentation is available on the product installation media.
- A `fixed width` font is used where the identification of spaces is important, including filenames, example SQL queries and any entries made directly into configuration files or the database.
- **Notes** are used to provide further information, including any prerequisites or configuration additional to the standard specifications.  
For example:  
**Note:** This issue only occurs if updating from a previous version.
- **Warnings** are used to indicate where failure to follow a particular instruction may result in either loss of data or the need to manually configure elements of the system.  
For example:  
**Warning:** You must take a backup of your database before making any changes to it.

# 1 Introduction

This document contains instructions on how to customize the MyID Self-Service Kiosk (SSK).

This includes:

- Adding a custom link to embed an HTML page in the SSK.  
See section [2](#), *Adding a custom page*.
- Using an embedded HTML page to capture fingerprints.  
See section [2.3](#), *Capturing fingerprints*.
- Replacing the MyID and Intercede logos.  
See section [3](#), *Customizing the logos*.

## 1.1 Change history

Version	Description
TLK2016-01	First version.

## 2 Adding a custom page

By default, the SSK provides links on its front screen to carry out the following actions:

Welcome to the MyID Self-Service Kiosk  
Please insert your card or select an option to continue

- Check for requests
- Request a temporary card
- Report a problem

You can customize this screen to add additional options. Each option contains the URL of a web page; the SSK displays this web page inside the kiosk. You can simply display information to the Kiosk user, make use of features of the Self-Service Kiosk such as capturing fingerprints, and post the captured information to a third-party system. When you have completed any actions, you can return to the SSK.

See:

- section [2.1, Adding a link](#).
- section [2.2, Returning to the SSK](#).
- section [2.3, Capturing fingerprints](#).

**Note:** For full information about the Kiosk API, including requirements for the WebView2 component used to host custom pages, see the SSK Web API documentation provided in the MyID Client Integration Toolkit.

## 2.1 Adding a link

To add a link to the front screen of the SSK, you must edit an XML configuration file on the web services server.

The file is called `WebLinks.xml` and is in the `content` subfolder of the `MyIDProcessDriver` web service; by default, this is:

`C:\Program Files\Intercede\MyID\SSP\MyIDProcessDriver\content\`

If the file does not exist, you can create it.

The content of the file is:

```
<?xml version="1.0" encoding="utf-8" ?>
<links>
  <link>
    <id>10000001</id>
    <name translationID="0">Link Text</name>
    <desc translationID="0">Link Description</desc>
    <order>1</order>
    <url>https://myserver.domain.com/link/</url>
    <image>Content/img/workflow-icons/medium/Adjudicate-Person.png</image>
    <platform>8</platform>
  </link>
</links>
```

Within the `<links>` node you can have one or more `<link>` nodes, each of which describes a link button.

The fields of a `<link>` node are:

Field	Description
<code>id</code>	A unique ID for the link. This must not appear in the <code>Operations</code> table in the MyID database; you are recommended to use values 10000001 and higher.
<code>name</code>	The text that appears on the link.
<code>desc</code>	A description of the link.
<code>order</code>	The order in which the link appears on screen. Reserved for future use.
<code>url</code>	The URL of the page you want to embed within the SSK. To prevent any potential issues with cross-server communication, you are recommended to host the embedded page on the same server as the MyID web services.
<code>image</code>	The image from the <code>MyIDDDataSource</code> web service to use for the link. For SSK, this image is not used; this field is appropriate only for other platforms.
<code>platform</code>	For SSK, set this to 8.

Once you have edited the file, save your changes, then recycle the **MyIDWebService** application pool in IIS to ensure that the web service is using the latest version of the file.

## 2.2 Returning to the SSK

You can determine the content of the embedded custom page; you can display information, capture details to post to external systems, and use the fingerprint capture feature of the SSK.

Once you have completed the task, however, you must close the embedded page and return to the Kiosk main screen.

To do this, carry out the following JavaScript command in your custom page:

```
window.chrome.webview.hostObjects.MyID.Done("Complete");
```

The SSK closes the current web page and returns to the main screen.

**Note:** For full information about the Kiosk API, see the SSK Web API documentation provided in the MyID Client Integration Toolkit.

## 2.3 Capturing fingerprints

Your embedded web page can use the fingerprint capture feature of SSK.

The process is as follows:

1. Call the `CaptureFingerprints` function.
2. The SSK pops up the fingerprint capture dialog, and you capture the fingerprints.
3. The SSK returns the fingerprint data to a callback function.
4. You process this fingerprint data and carry out any required actions; for example, posting it to an external system.

The `CaptureFingerprints` function takes the following parameters:

```
window.chrome.webview.hostObjects.MyID.CaptureFingerprints
(<fingers>,<capture device>,<callback function>);
```

where:

Parameter	Description
<code>&lt;fingers&gt;</code>	<p>A string containing codes for the finger or fingers you want to capture.</p> <p>You can use the following codes:</p> <ul style="list-style-type: none"> <li>• LT – left thumb.</li> <li>• LI – left index.</li> <li>• LM – left middle.</li> <li>• LR – left ring.</li> <li>• LL – left little.</li> <li>• RT – right thumb.</li> <li>• RI – right index.</li> <li>• RM – right middle.</li> <li>• RR – right ring.</li> <li>• RL – right little.</li> </ul> <p>For example, to capture right index and left index, use:</p> <pre>"RI;LI"</pre>
<code>&lt;capture device&gt;</code>	<p>A string containing the ID for the fingerprint capture device you want to use.</p> <p>You can use the following:</p> <ul style="list-style-type: none"> <li>• Secugen</li> <li>• UareU</li> </ul>
<code>&lt;callback function&gt;</code>	<p>The name of the function in your embedded web page to which the fingerprint capture screen will return the captured fingerprint data.</p>

For example:

```
window.chrome.webview.hostObjects.MyID.CaptureFingerprints
("RI;LI", "Secugen", captureFingerprintsCallback);
```

**Note:** For full information about the Kiosk API, see the SSK Web API documentation provided in the MyID Client Integration Toolkit.

### 3 Customizing the logos

By default, the SSK displays MyID logo on the front page:

Welcome to the MyID Self-Service Kiosk  
Please insert your card or select an option to continue

and the Intercede logo on the contact page:

#### Further assistance

You have reached this page because you chose to cancel an activity.

If you were experiencing problems please contact the helpdesk using the details below.

Please remember to remove your card before leaving the kiosk.

Contact Details:

Continue

You can replace these logos with images of your own choice.

To replace the logos:

1. Create the following PNG format images:
  - `UniformLogo.png` – this image is used for the MyID logo at the top right of the screen. You are recommended to use a square image. SSK scales the image to fit the available space without affecting the aspect ratio of the image. A 1:1 aspect ratio is recommended to make the most use of the available space.
  - `WideLogo.png` – this image is used for the Intercede logo on the contact page. You are recommended to use a rectangular image. SSK scales the image to fit the available space without affecting the aspect ratio of the image. A 15:1 width:height aspect ratio is recommended to make the most use of the available space.
2. In Windows Explorer, navigate to the `%programdata%` folder.  
By default, this is:  
`C:\ProgramData\`
3. Inside the program data folder, create the following folder structure:  
`Intercede\MyIDSelfServiceKiosk\`
4. Copy the `UniformLogo.png` and `WideLogo.png` files into this folder.  
The next time you start up SSK, these images are used in place of the MyID and Intercede logos.

#### Further assistance

You have reached this page because you chose to cancel an activity.

If you were experiencing problems please contact the helpdesk using the details below.

Please remember to remove your card before leaving the kiosk.

Contact Details:

[www.intercede.com](http://www.intercede.com)

Continue

**Note:** You can also customize the contact details text and the URL beneath the logo using the translation system. The resource string for the contact details has the ID 9100403, and the string for the URL has the ID 9100415 in the `Master.csv` file. See the *Translation for Web Services* document in the Translation package for details; contact customer support quoting reference SUP-71 to obtain this package.

### Further assistance

You have reached this page because you chose to cancel an activity.

If you were experiencing problems please contact the helpdesk using the details below.

Please remember to remove your card before leaving the kiosk.
